## Summary

Data scientist with over two years of experience building machine learning and AI tools that people use in daily operations. At PT Alvindo Catur Sentosa, I have delivered a document assistant, ID-card and receipt OCR, a product-matching tool, a sales pipeline report and demand analysis for procurement, most of them already in daily use. I test my work against real cases, I am clear about its limits, and I keep company data on-premises wherever I can.

## Experience

**Data Scientist**

PT Alvindo Catur Sentosa | West Jakarta, Indonesia | Aug 2024 – Present

- Built an internal knowledge assistant (RAG) that answers IT staff questions from company documents with source references. It runs entirely on company hardware and cites the right document 85.7% of the time on an 88-question test set.
- Automated visitor registration with ID-card (KTP/SIM) OCR. Check-in dropped from over 2.5 minutes to about 5 seconds, saving roughly 54 staff hours from January to September 2026. Open source: https://github.com/Steffi-Soe/indonesian-id-ocr-service
- Developed fuel and toll receipt scanning for drivers' expense claims, and cut fuel-receipt processing from 2.8 to 1.8 seconds per image.
- Created Cariproduk, a product-matching tool that maps customer requests (text, photos or spreadsheets) to the right catalog items. Accuracy stayed between 90% and 97.6% in monthly checks through 2025.
- Delivered a weekly sales pipeline report and a summary page for every customer within four weeks. Rules produce the numbers, and a local language model only writes the text.
- Analysed demand patterns for about 11,000 products and gave procurement reorder-point, inventory health and supplier lead-time analyses.
- Reviewed more than ten AI and machine learning ideas across Finance, Sales, Procurement and Logistics to plan the 2026 work program.

**Machine Learning Developer Intern**

PT Super Giga Generasi (Fotoyu) | Jakarta, Indonesia | Feb 2023 – Mar 2024

- Built a face classification model in Python and PyTorch that distinguishes human faces from primate faces (such as apes and monkeys) in photos.

## Education

**Bachelor of Science in Information Technology (Intelligent Systems)**

BINUS University | Jakarta, Indonesia | Sep 2020 – Aug 2024

- GPA 3.82 / 4.00
- Relevant coursework: Machine Learning, Deep Learning, Computer Vision, Database Systems, Software Engineering
- BINUS Basketball: designed merchandise and managed promotions (Feb 2022 – Aug 2023)

**Certificate IV in Intermedia / Multimedia**

Nova Institute of Technology | Melbourne, Australia | Sep 2018 – Oct 2019

## Skills

- Programming: Python, SQL, TypeScript, JavaScript
- Machine Learning: PyTorch, scikit-learn, LightGBM, XGBoost, time series forecasting (StatsForecast, Prophet)
- AI and NLP: Large Language Models (LLM), Retrieval-Augmented Generation (RAG), Ollama, Gemini API, Qdrant, FAISS, Natural Language Processing (NLP)
- Computer Vision and OCR: PaddleOCR, Tesseract, OpenCV, ONNX Runtime, Docling
- Data and Backend: FastAPI, Flask, PostgreSQL, DuckDB, Polars, Meilisearch, React
- MLOps and Tools: Docker, MLflow, Git, GitHub Actions, Jenkins, pytest
- Design: Adobe Photoshop, Adobe Illustrator
